TECHNICAL FEATURES:

External rotor axial fans are particularly suitable for moving air as they ensure a high level of silence, efficient electrical performance, and soft starting, with low peak current.

Protection class: IP44-IP54 – Class F

Extreme working temperatures: -20 °C / + 50 °C

FIELDS OF USE:

Axial fans are mainly used in the following fields:

- Condensation circuits for large refrigeration units
- Spares for cooling circuits for welding machines and dehydrators
- Spares for extraction - ventilation plants
