- They are available in 4 different sizes, each with 8 different thicknesses, so as to provide the right correction in alignment for each machine.
- They are made of excellent quality stainless steel, to prevent corrosion when they are exposed to acids and alkalis.
- Markings concerning dimensions and thickness allow immediate identification.

- They are perfectly flat to ensure stability and consistent support for the machine over the entire support surface area.
- They are entirely deburred, with rounded corners, to reduce the risk of cuts during alignment operations.
- They have a perforated tab to facilitate positioning and removal
- They are reusable.
