measurements in mm

1. Grip
2. Shaft
3. Head
4. Fulcrum Point

DESCRIPTION:

A tool that makes it possible to bend rectangular wire in copper and aluminium with extreme ease.

CHARACTERISTICS

- Ergonomic grip.
- Requires less force to make the bends.
- Compared to traditional pliers, it is not necessary to squeeze with the strength of your hand.

USE:

- Turn the movable part (3) so that the distance from the fixed part (2) is at its furthest.
- Insert the rectangular wire to be bent between the Head (3) and the Shaft (2), holding the tool by the grip.
- Position the fulcrum point (4) on the point where the bend is required.
- Pull the tool and move in the desired direction.

CUTTER

For insulating materials
